

In the day of advanced technology the age old job of securing your perimeter has just got a lot easier. Introducing our brand new IMB and VMS series microwave perimeter protection systems. Utilizing our proven technology and our advanced microprocessor architecture, the devices are able to distinguish between a perpetrator and a flock of geese, minimizing the amount of false alarms. The system is designed to continuously learn and adjust to changing weather and terrain conditions - it is able to understand changing snow height, varying rain and wind speed conditions and etc. The advantages don't stop there - the systems are built in extremely attractive, extra small footprint shatter and weather proof plastic, rated to temperatures of up to -60 .
